Mosquito

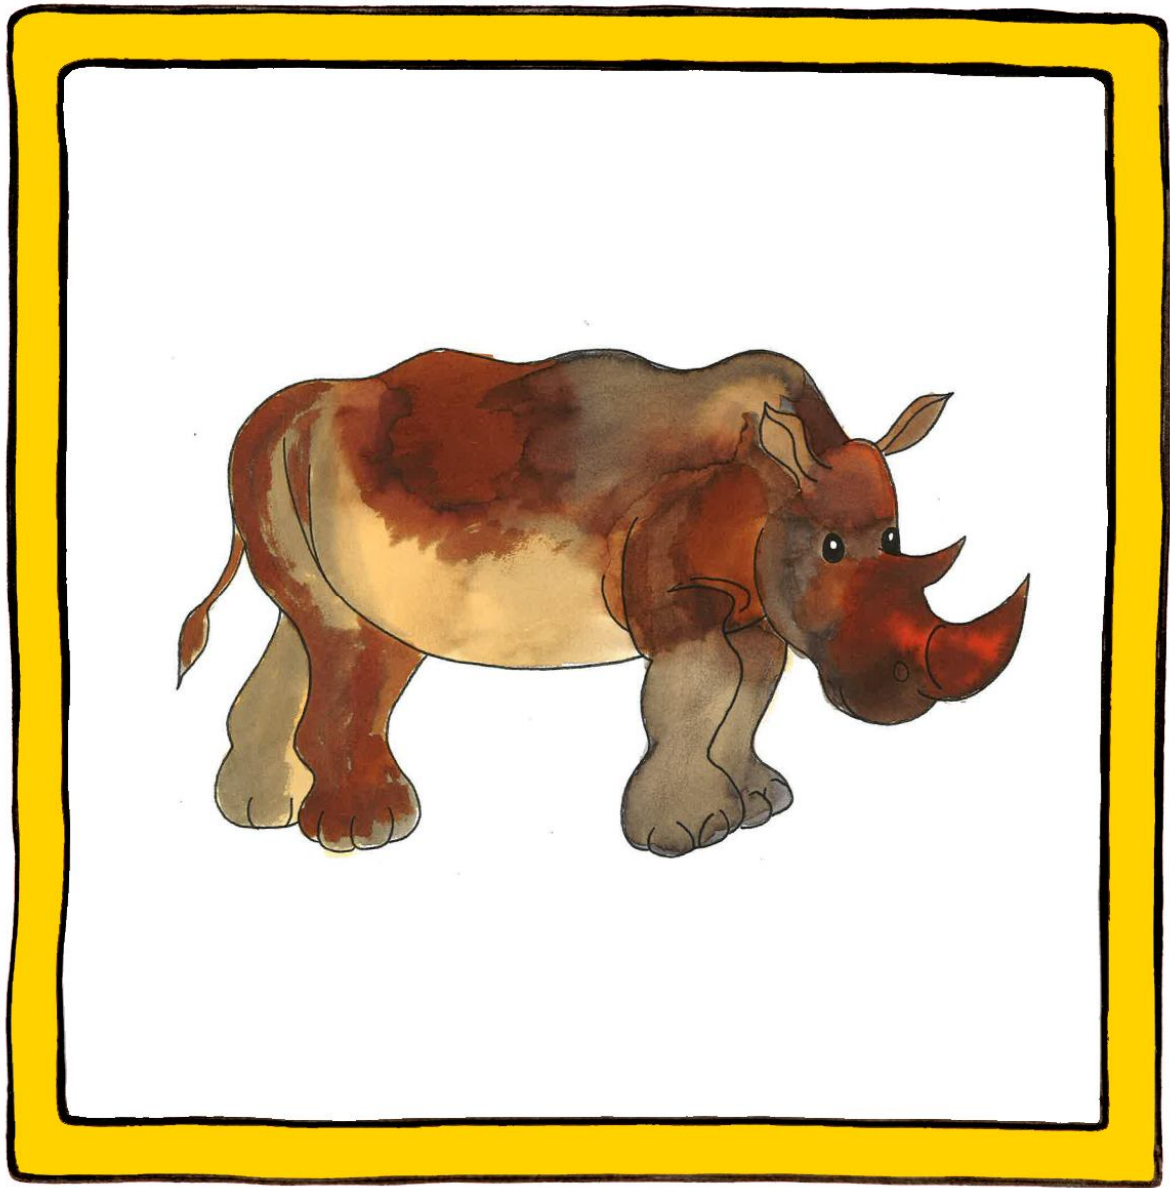

Palm down closed index and thumb establish contact with back of left hand then moves upward changing hand shape to flat hand which moves down to contact back of left hand.

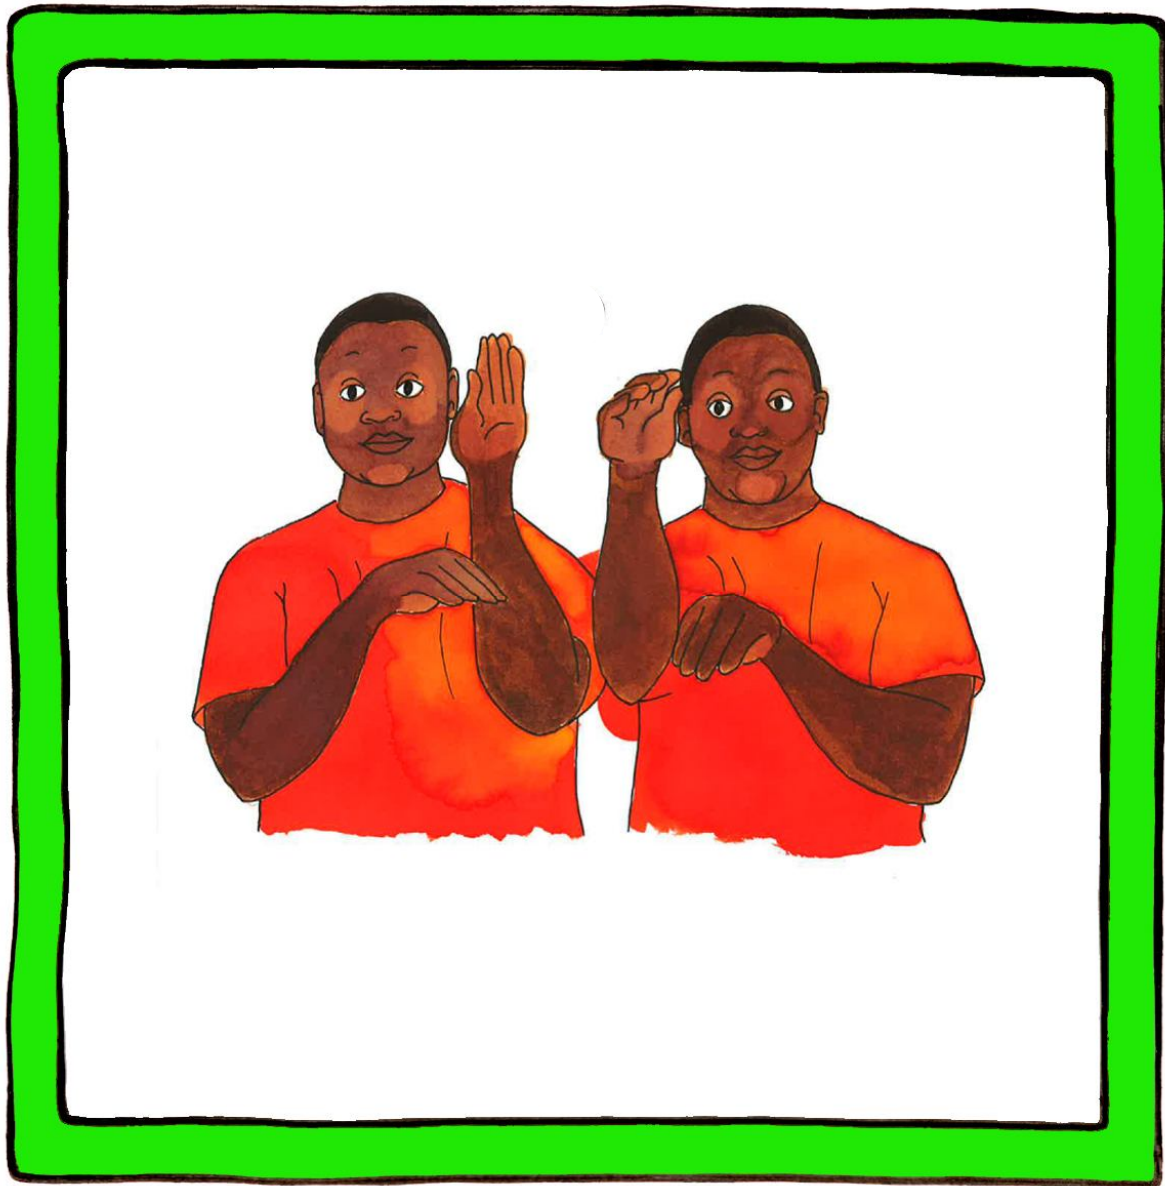

Rhino

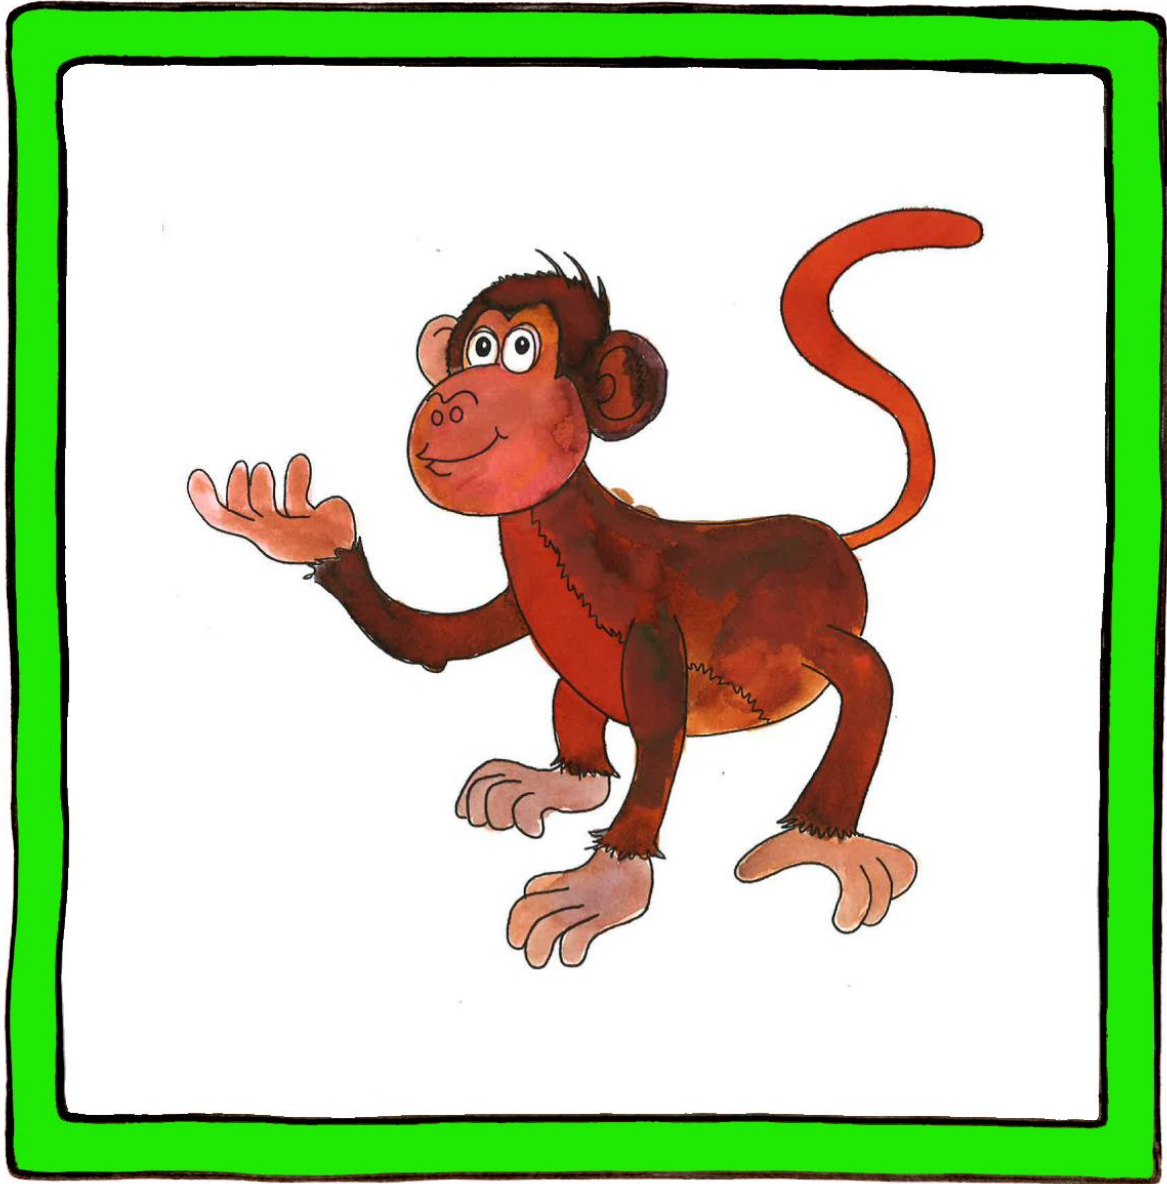

Both extended index fingers
(the right hand above the left hand)
held in front of the face makes short upward movement.

Monkey

Palms down flat hands alternate so that dorsal side of right hand contact left elbow and dorsal side of right hand contacts the inner part of the left elbow.

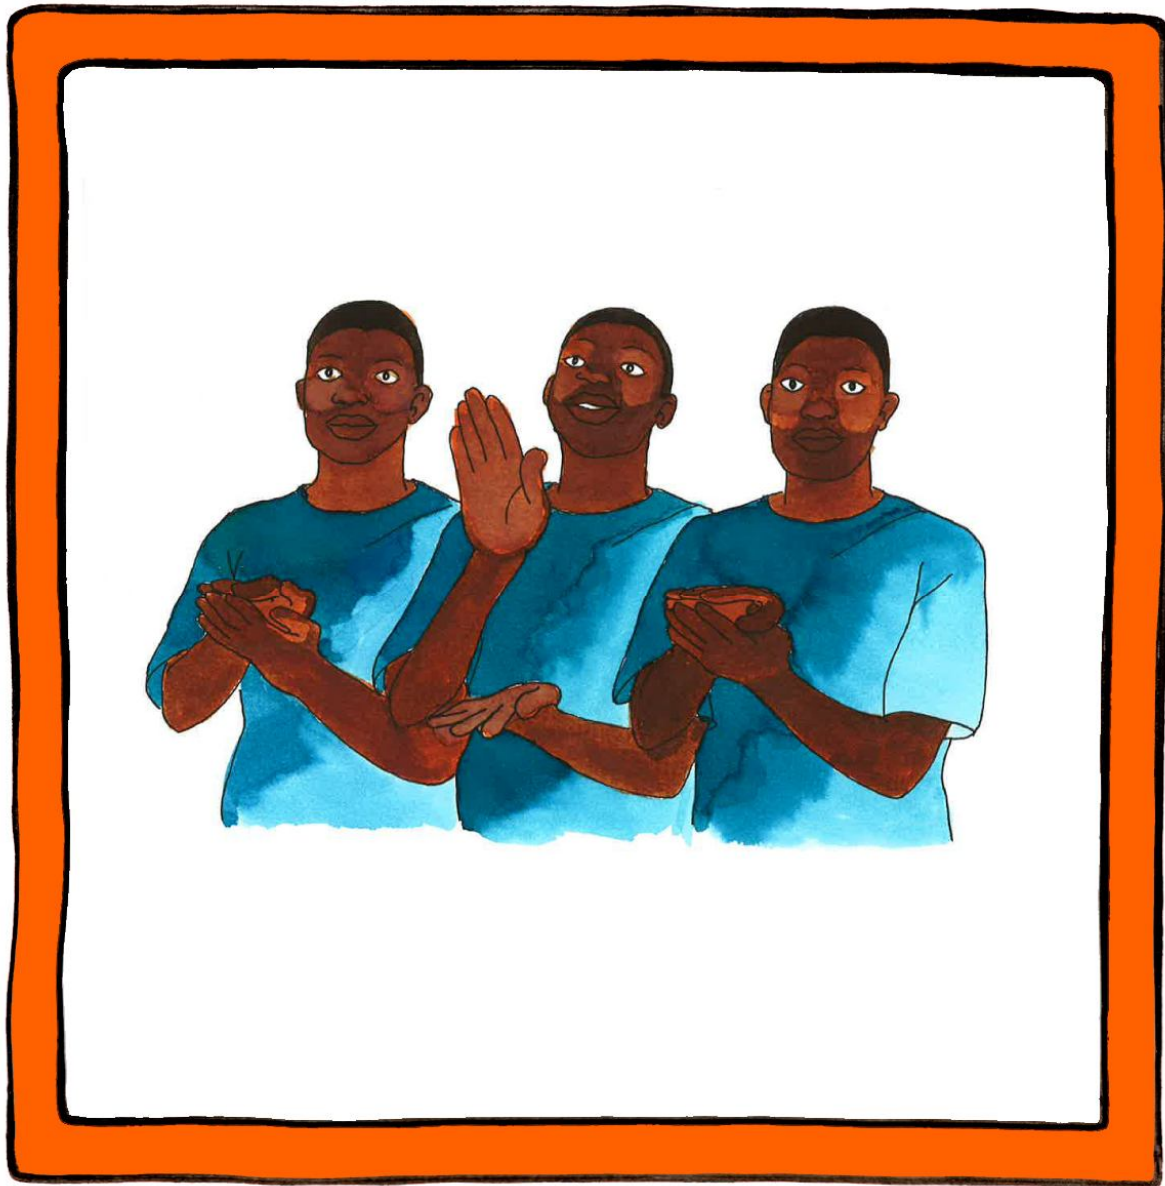

Hippo

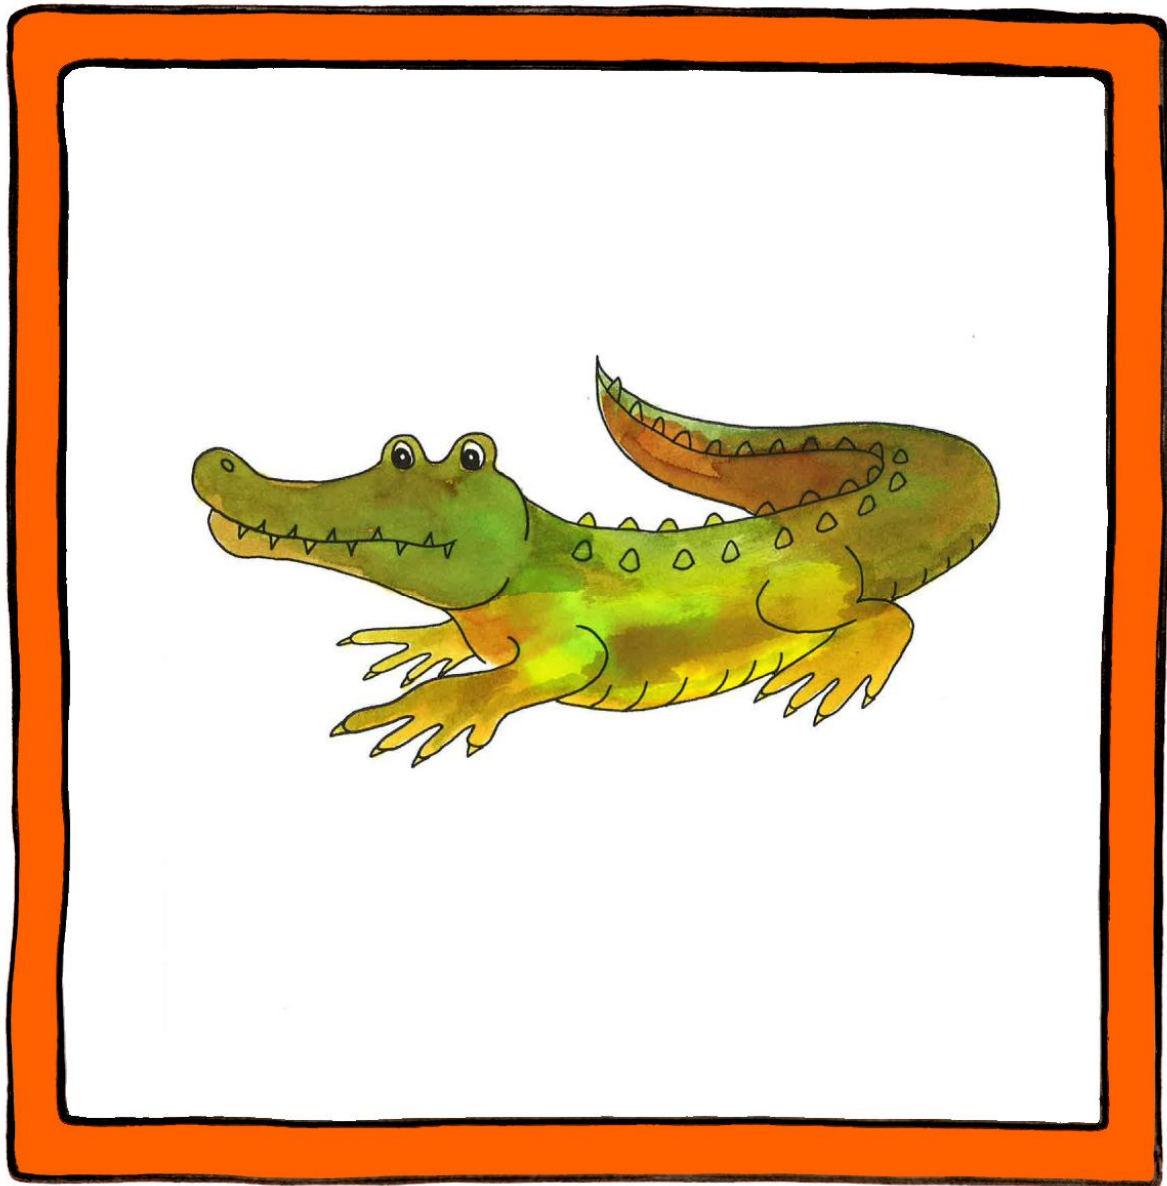

Palm facing clawed hands, right on top of left with finger tips contacting, the right hand moves upward.

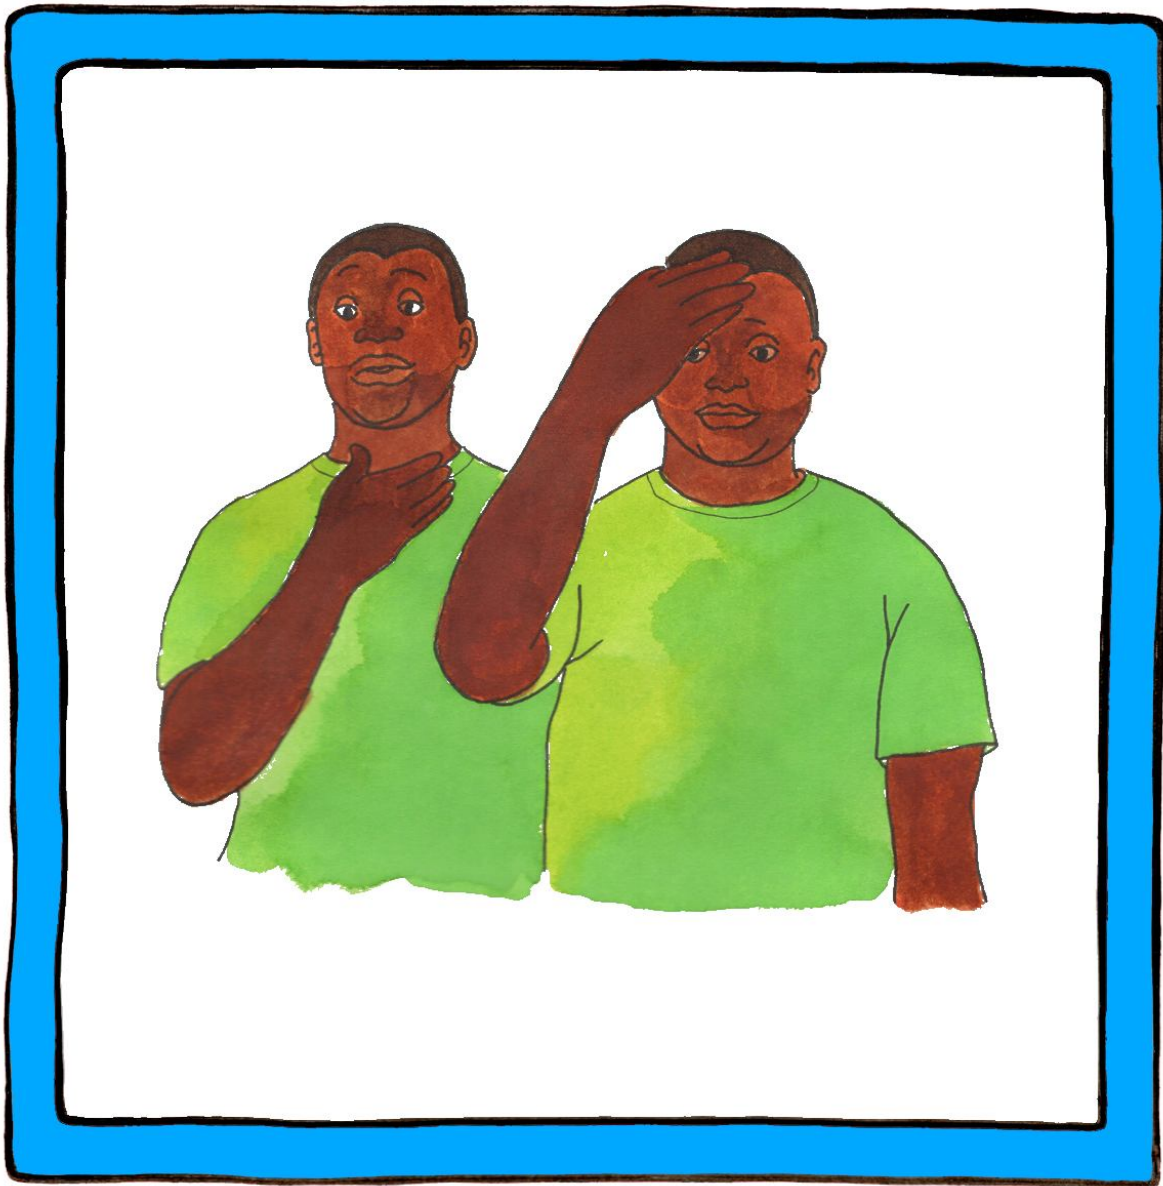

Crocodile

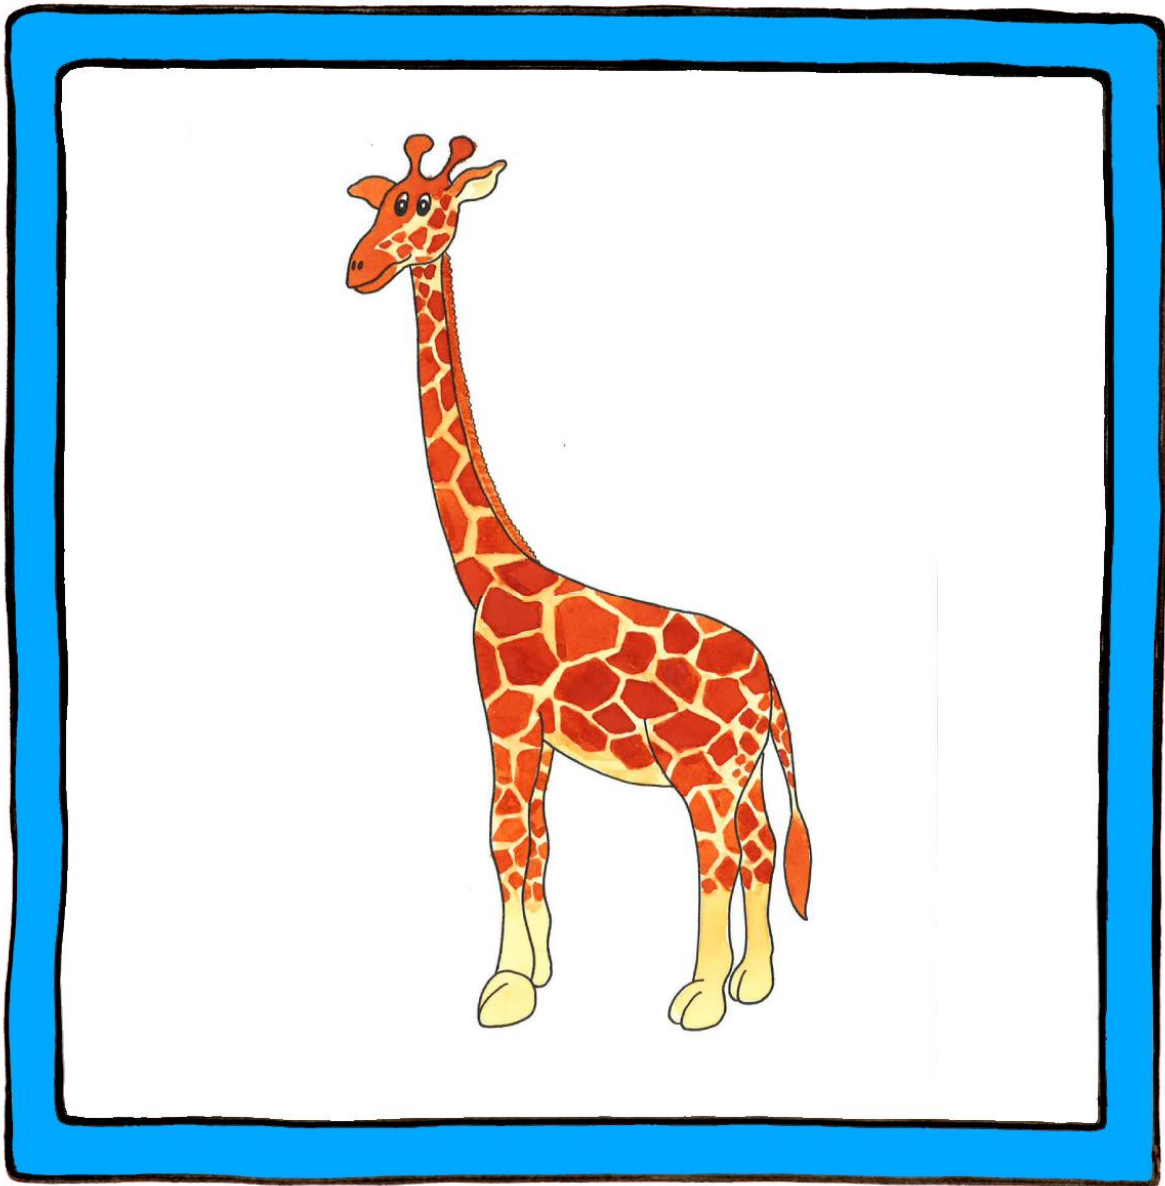

Palms facing flat hands pointing forward held together in front of the body, right hand moves upward then downward to contact left palm.

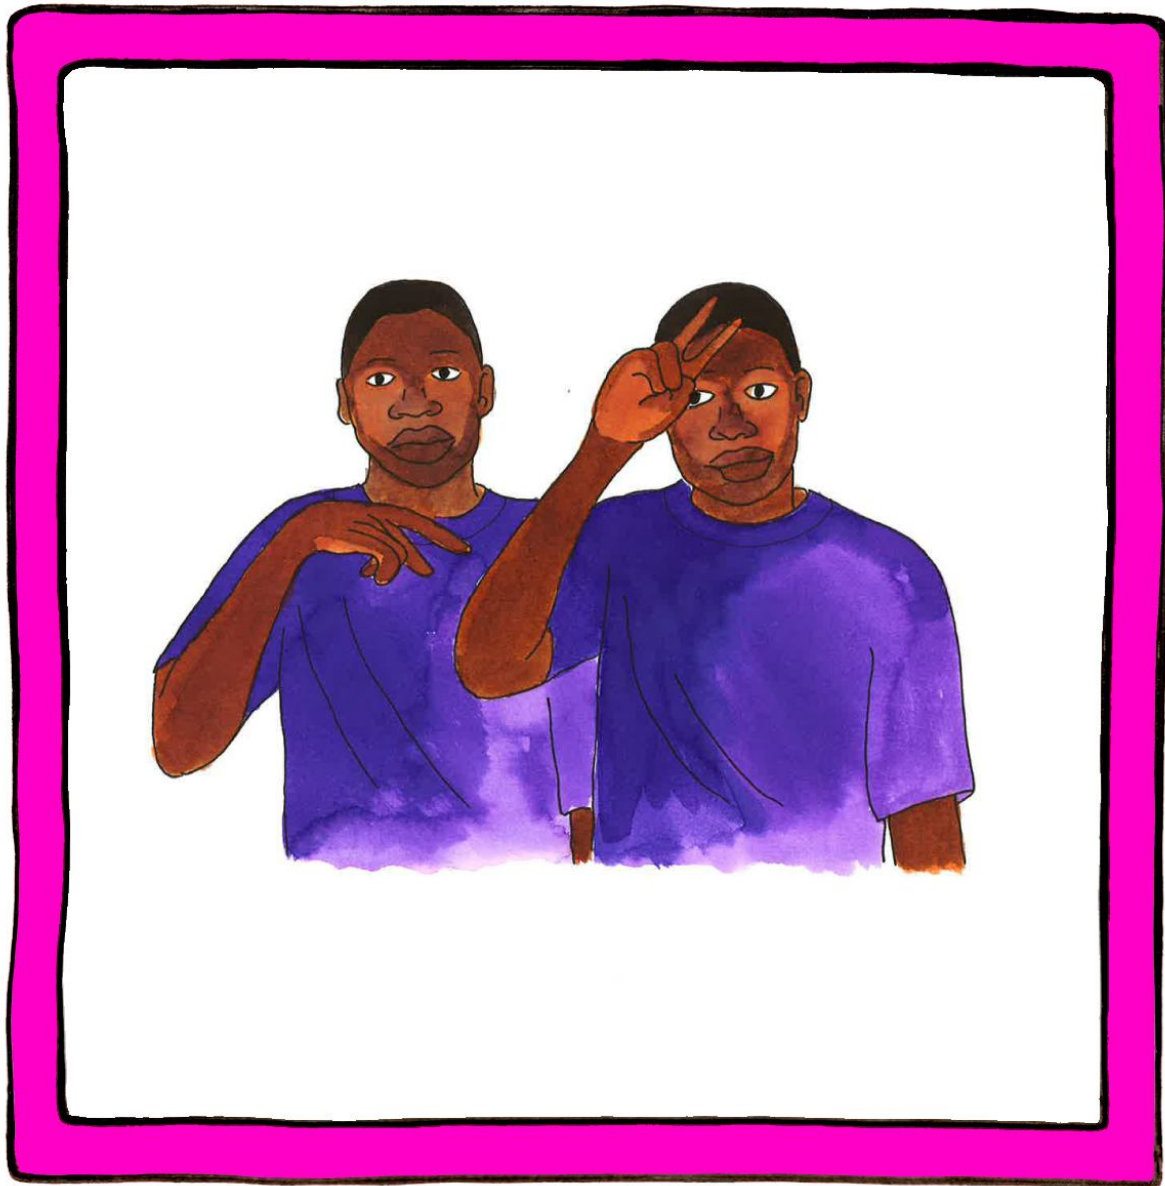

Giraffe

Palm back 'C' hand held in front of the neck moves forward in upward curve from the neck.

Goat

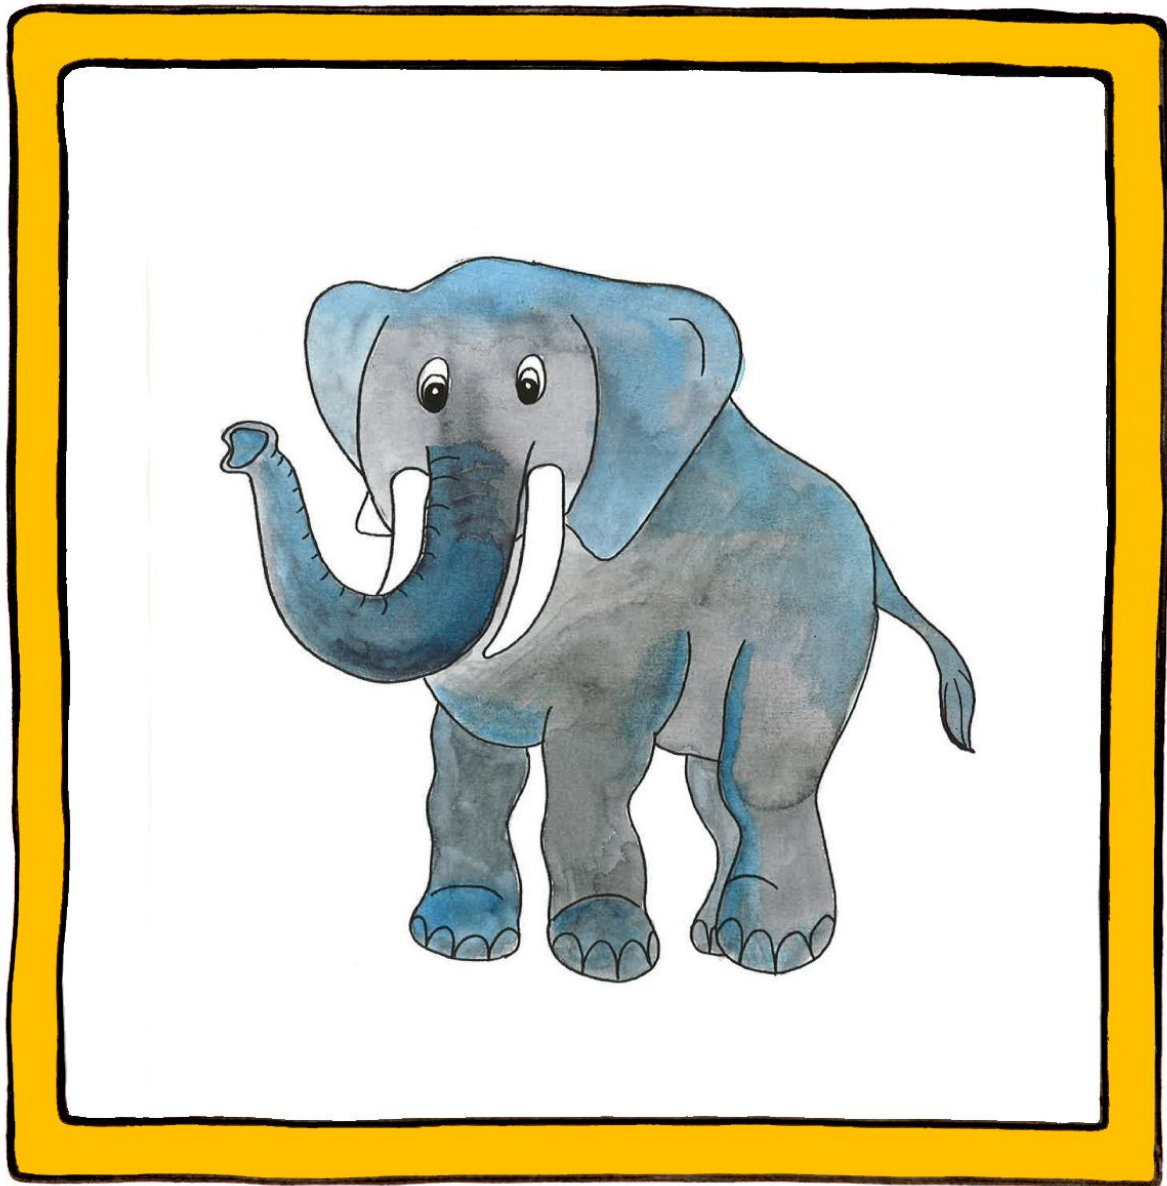

Palm back extended index and middle fingers, pointing down held in front of the chin, twist upward from wrist to contact the forehead, changing palm orientation.

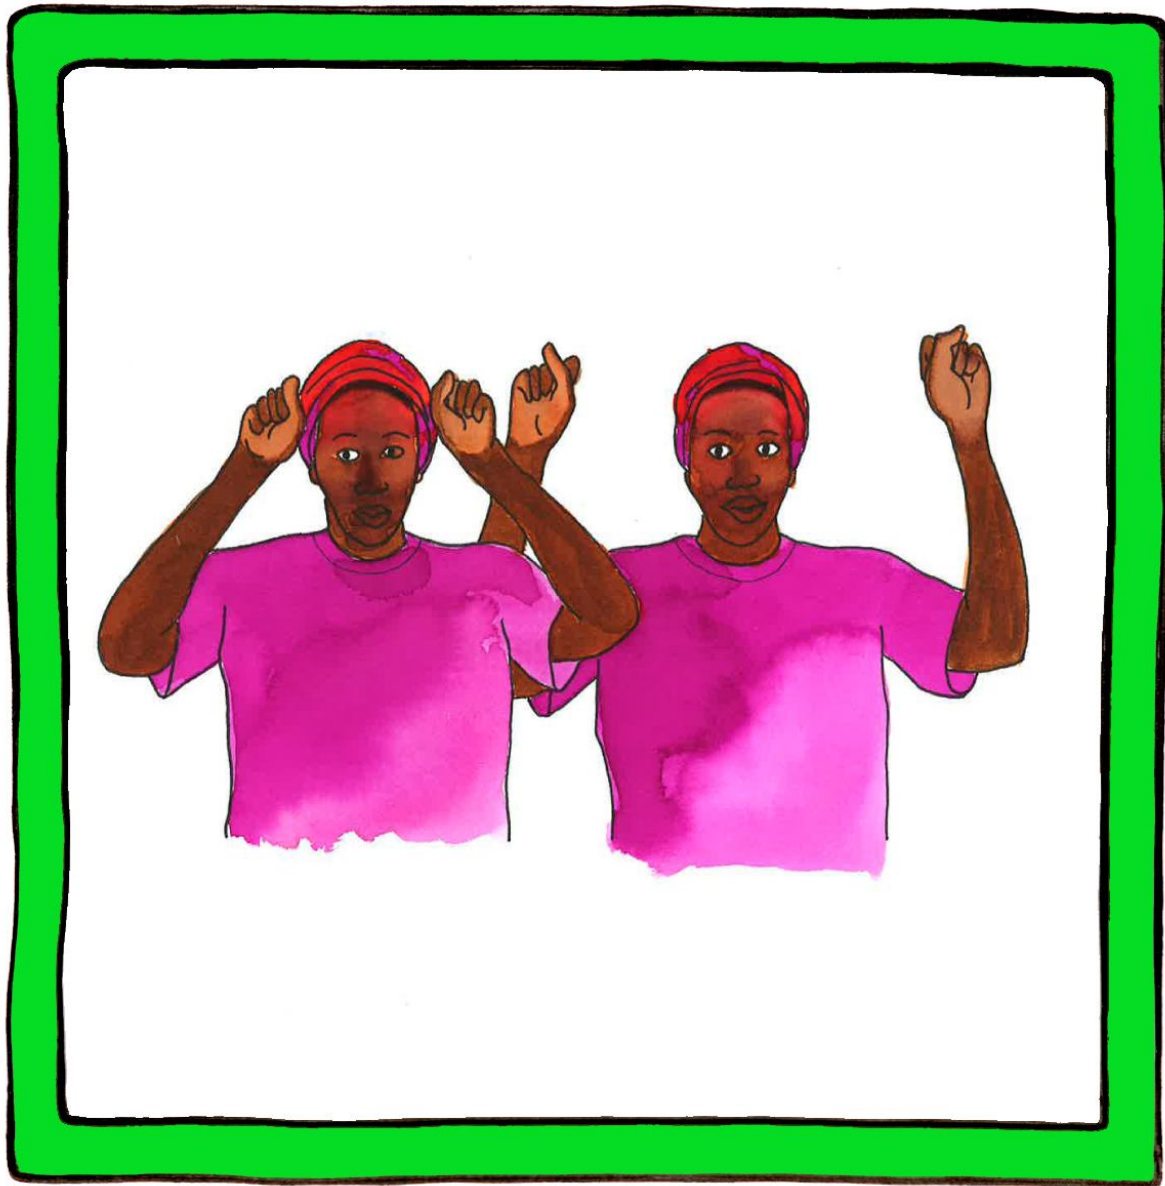

Elephant

Both hands cross in front of the body so that left hand contacts the nose while the right hand makes repetitive side to side movements twisting from the wrist.

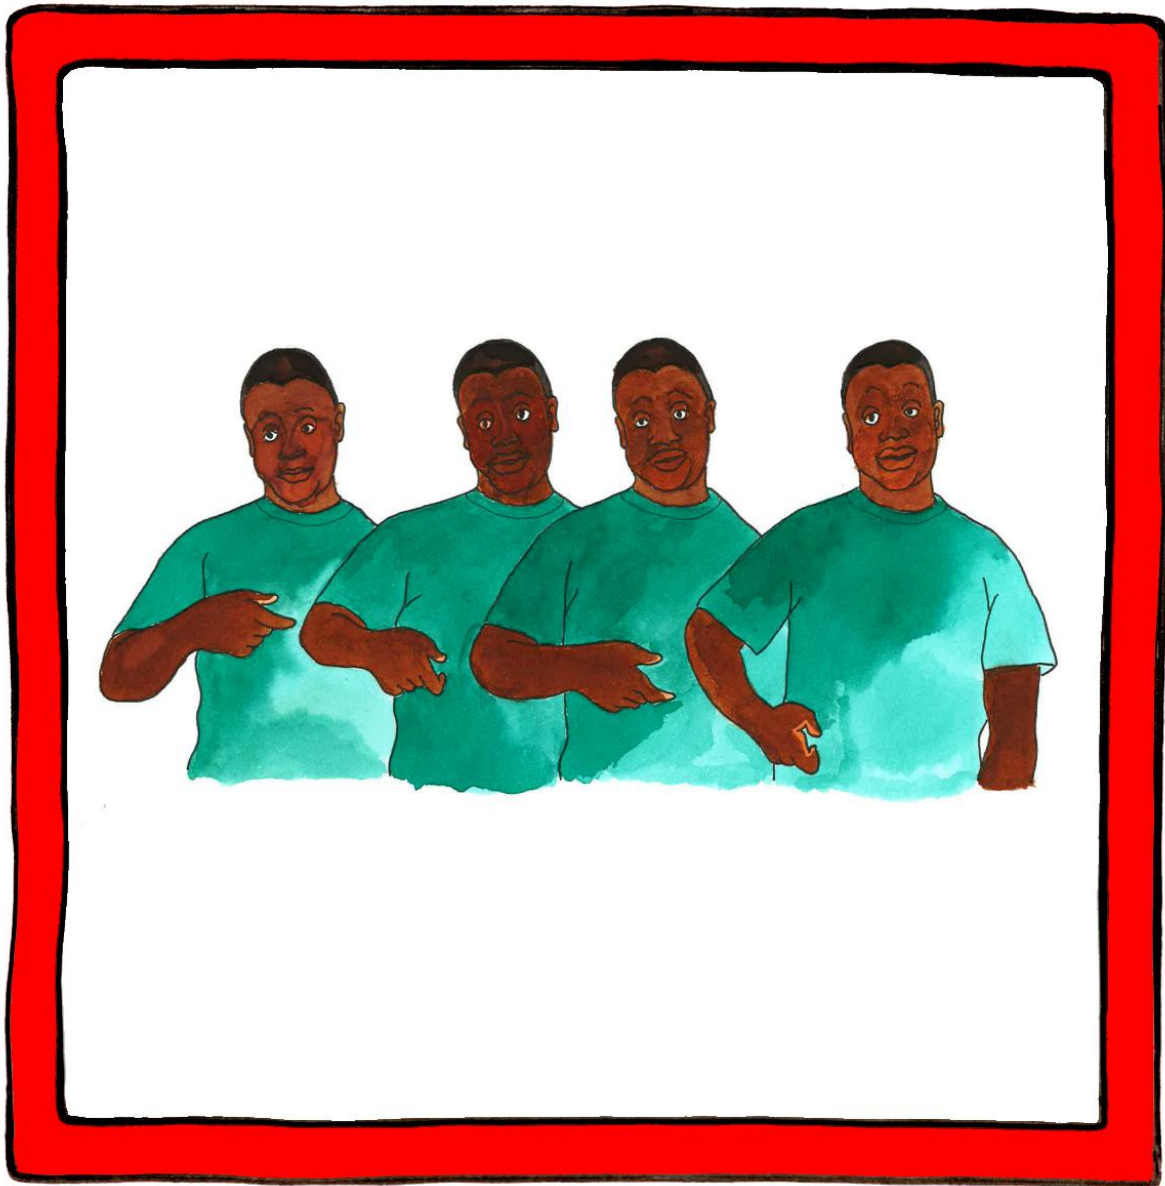

Buffalo

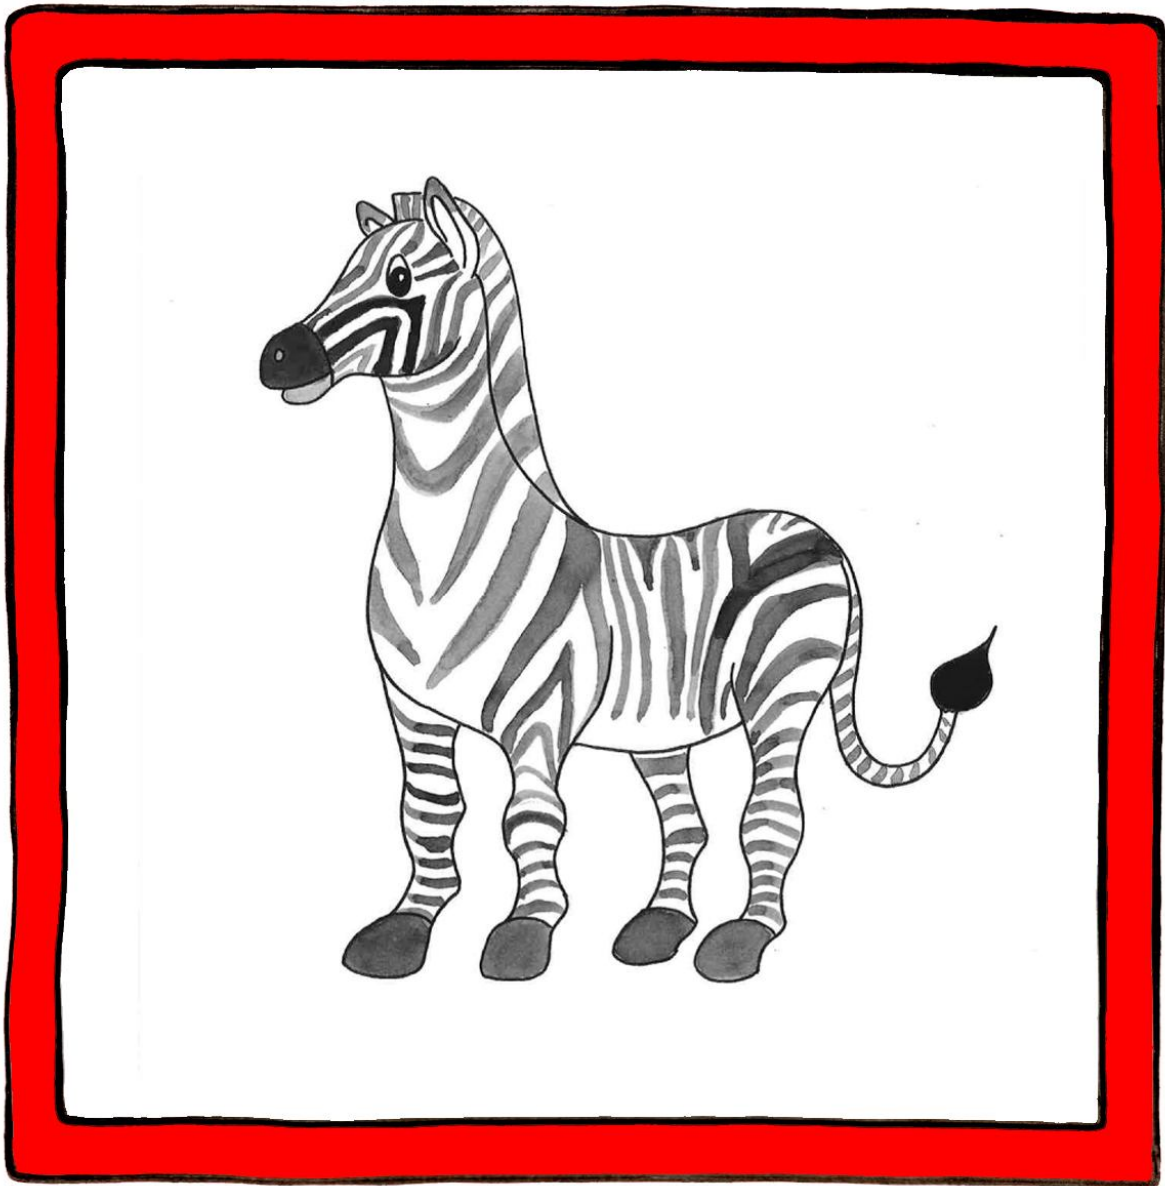

Palms forward First hands held close to the sides of the head,
moves upward/forward away from the head.

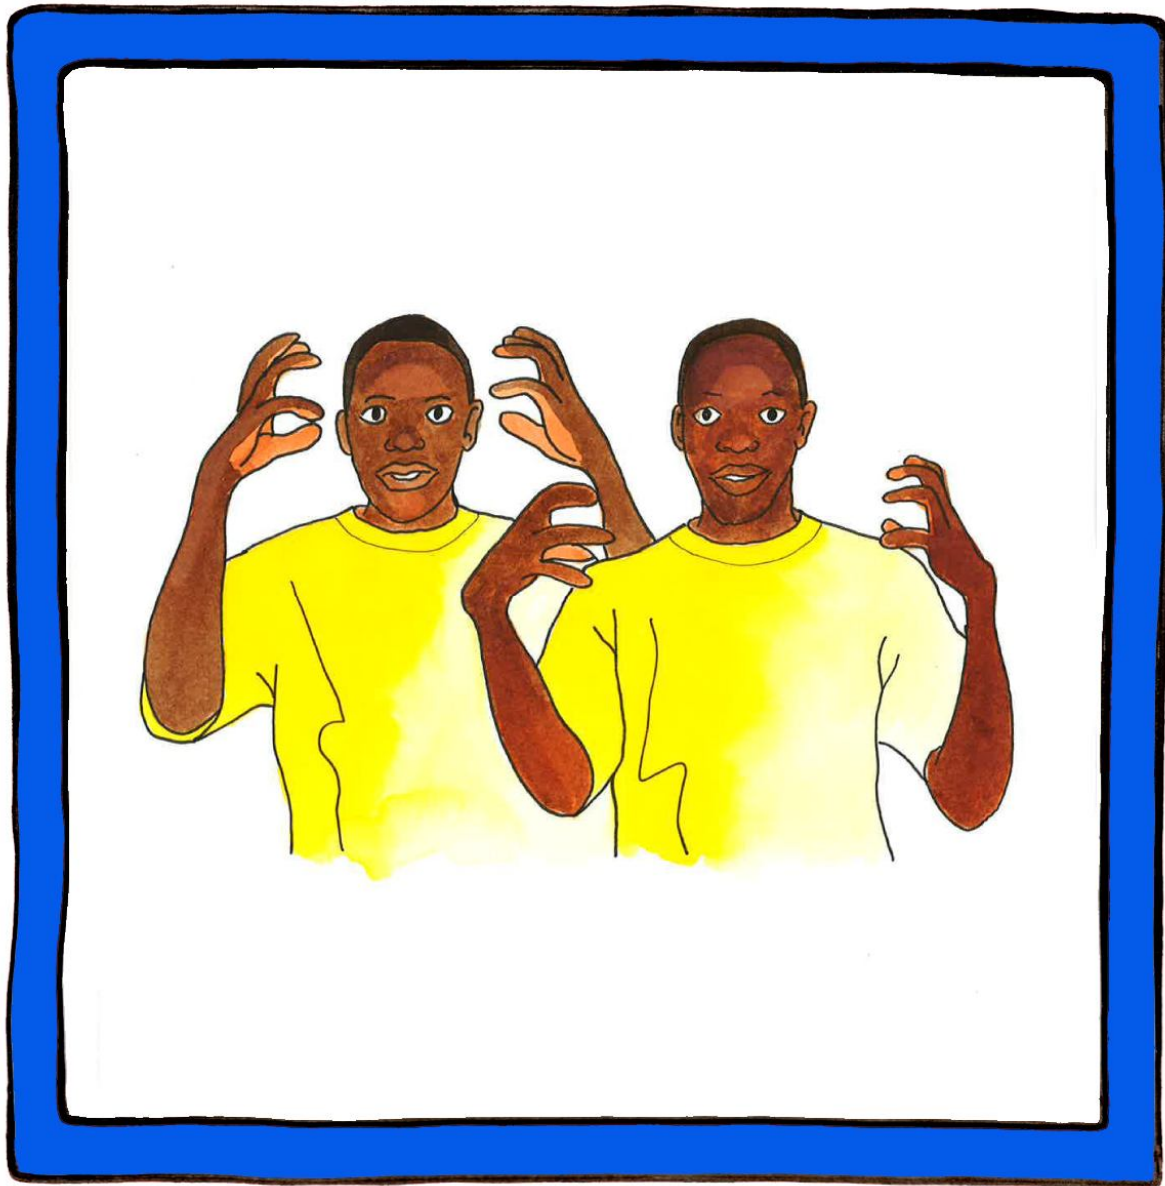

Zebra

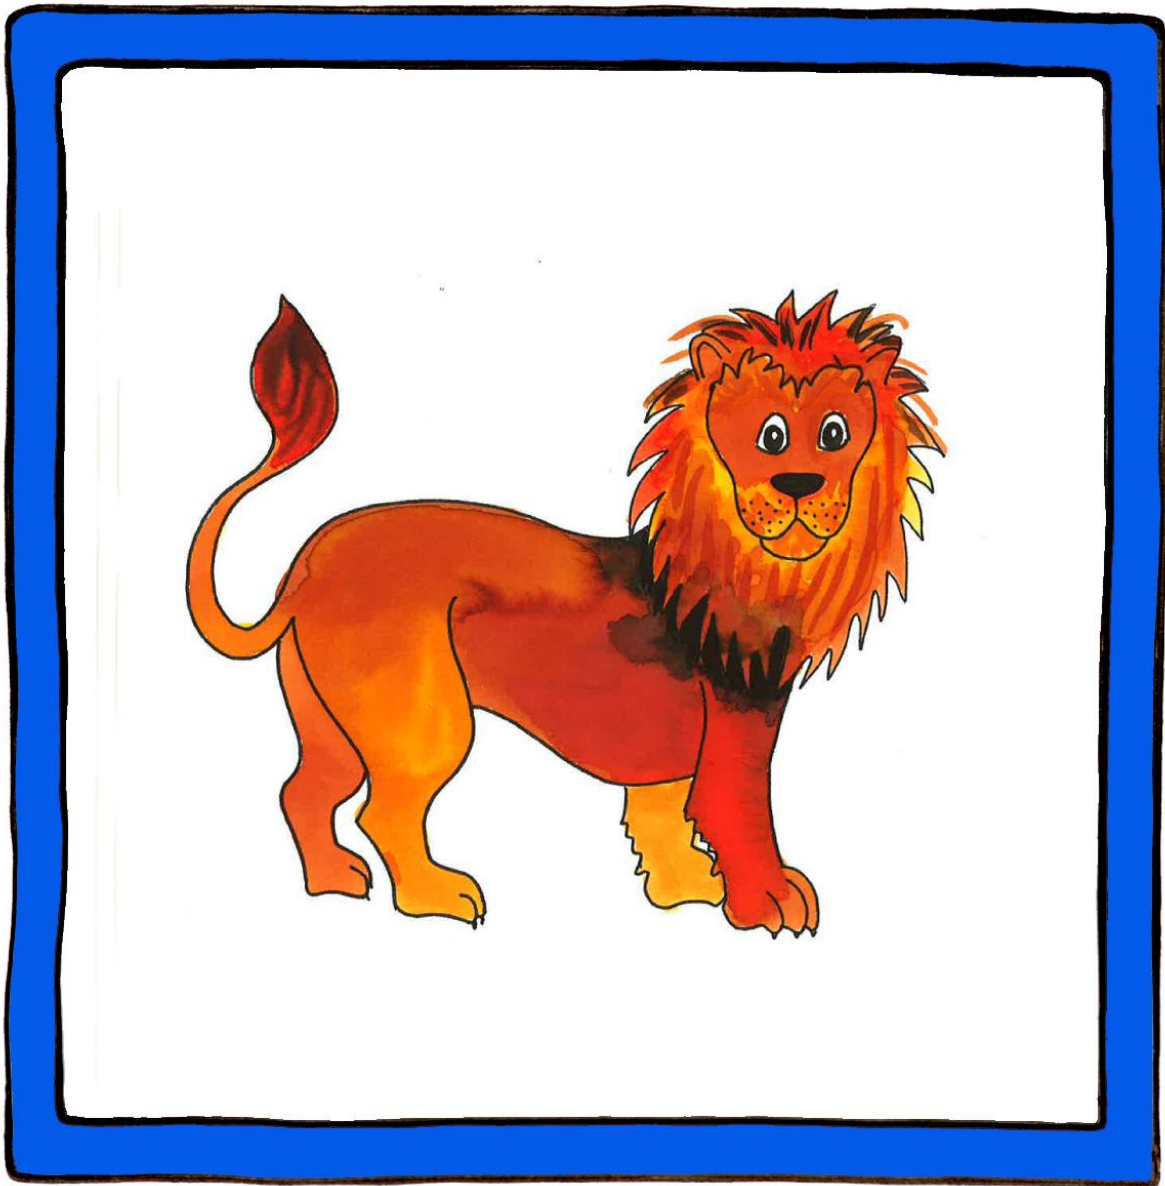

Palm back open-beak thumb and index finger moves from left to right across the chest several times tracing the stripes.

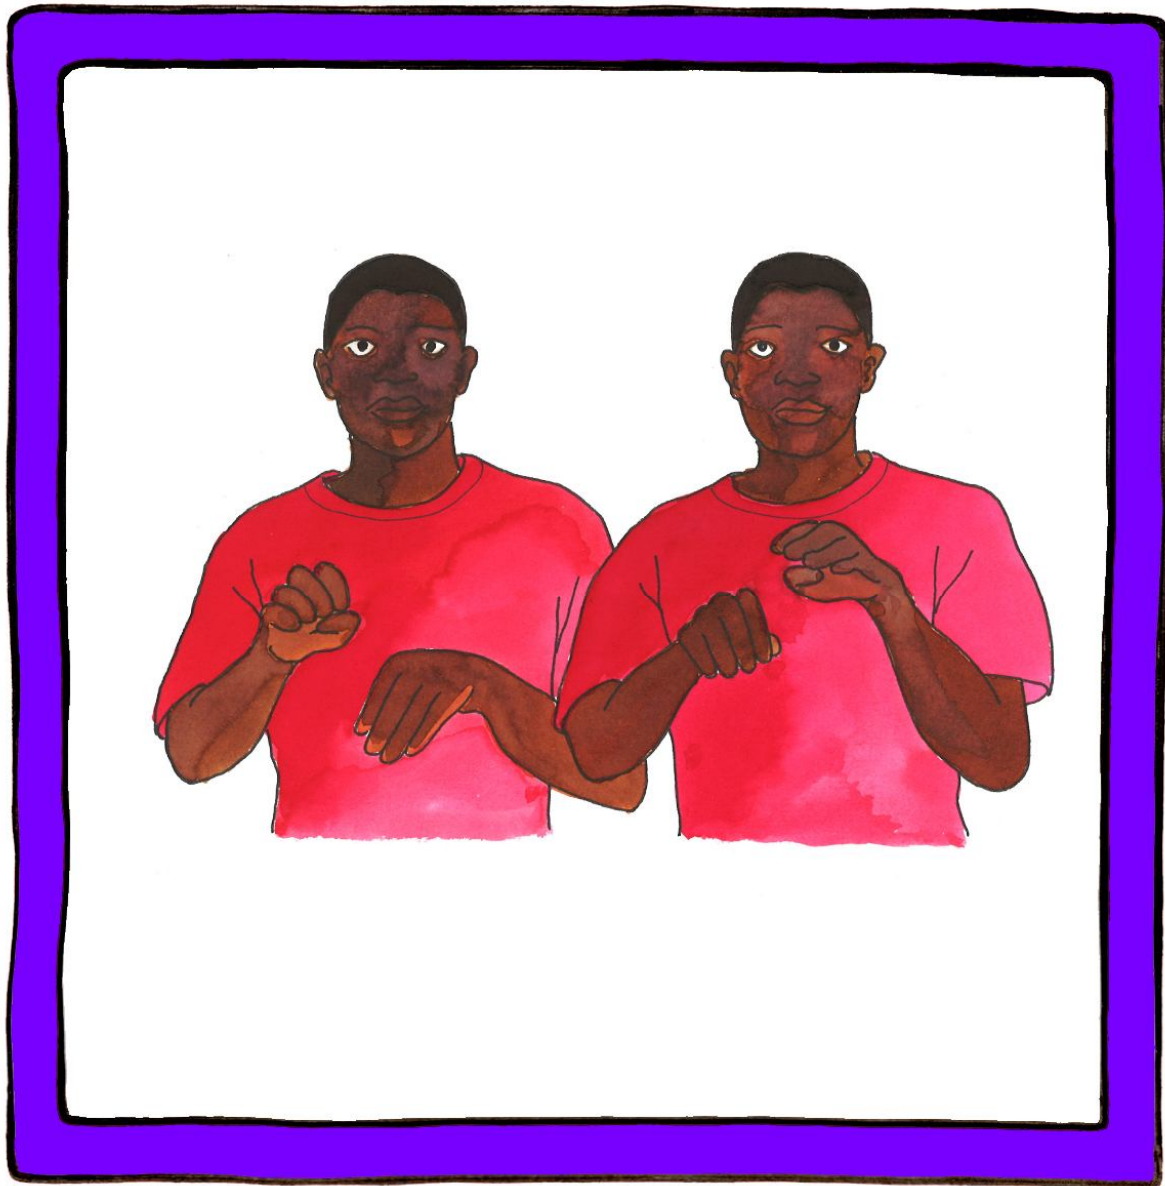

Lion

Both clawed hands held at the side of the head simultaneously move down to shoulder level then both hands make forward pouncing movement alternatively.

Chameleon

Palms down bent flat hands (thumbs in), pointing forward,
makes short movements alternatively.
